

Securing Schools & Universities

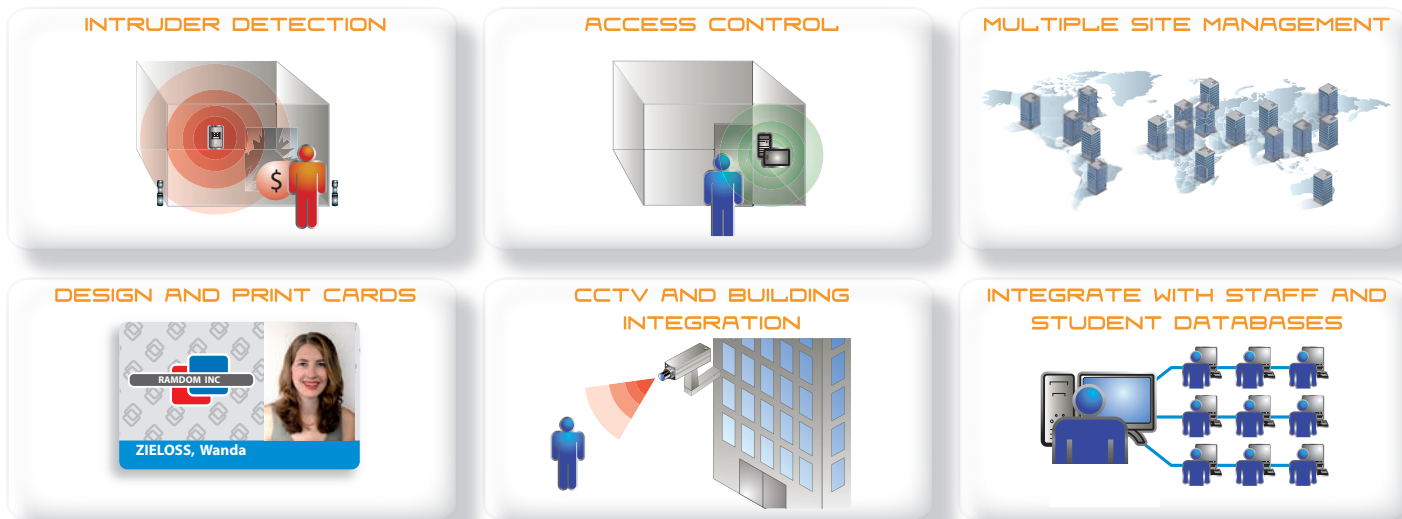

Provision of a safe and secure environment for students and staff is of increasing concern to all educational institutions. Inner Range provide scalable solutions suitable for small schools through to distributed multi-campus institutions.

Intelligent A-Grade Security Solutions

Meeting The Challenge

Educational institutions are unique. On the one hand, a profusion of valuable assets must be protected: buildings, fixtures, equipment and chemicals. On the other hand, a vibrant and rapidly changing student population requires access to classrooms, libraries, sports halls and laboratories. Balancing this equation can be a complicated problem, particularly when building systems integration such as heating and air conditioning is added to the mix. Inner Range provides the winning solution.

Stop Intruders

Inner Range has your campus covered. We can secure and protect your entire institution, day and night. As soon as an intruder enters a restricted area, the Inner Range system can sound the alarm, call a central monitoring station (to dispatch security guards) and notify the building manager with an SMS text message - immediately.

Access Control

World-leading intruder detection is just the start. In the same solution, Inner Range delivers fully featured access control for your facilities. Effortlessly manage over 1,000,000 users and their access permissions via the intuitive Inner Range software. Control the movement of staff, visitors and vehicles throughout your facility. Of course, a tamper-proof audit trail lets you review every single transaction. You'll know exactly what's going on, and where. Twenty-five years of refinement means you get the most efficient, integrated solution in the market today.

CCTV and Intercom Integration

One of the strengths of the Inner Range system lies in its ability to manage multiple security sub-systems. For example: A student presses the help button on an intercom point in the car park. The intercom message is then sent to the Inner Range system where it is treated as an alarm and various automated actions occur. The Inner Range system sends text messages and emails to guards, displays relevant CCTV images on the guard's video wall and even performs a lock-down in the surrounding vicinity. All systems working hand-in-glove to provide an effective security response.

Unprecedented Flexibility

Flexible programming means you can automate nearly any task. When the last staff member leaves the building, the Inner Range system can turn off the lights and air conditioning, arm the security system and notify a monitoring station that the premises are unattended.

No Matter How Big or Small

Many systems struggle to deal with the capacity required to service the number of buildings and classrooms in an educational facility. The few systems that can cope are typically very expensive. The scalable architecture within the Inner Range system is different. From a single classroom to multi-building multi-campus applications, the modular design of the Inner Range system means it can grow as you grow. Outstanding value for money and reduced total cost of ownership are provided as a result.

Emergency Management

In times of emergencies, the Inner Range system can be relied upon to secure your people and assets. With a push of a button the entire site can be locked-down but still provide access for key personnel, such as managers and emergency workers. Email and text notifications can be automatically sent to all students and staff in such an event. This messaging framework can also be used for general purpose messaging in non-emergency times. That's the power of an Inner Range system!

Inner Range have been providing security solutions to the education sector for over 25 years. We have a proven track record with thousands of education facilities throughout the world protected by the Inner Range system. For case studies in the education sector, please visit: www.innerrange.com
